Omar Abdelnaby

Mobile Software Engineer — Flutter · iOS · Android

Cairo, Egypt · **Open to relocate to Saudi Arabia (Riyadh / Jeddah)**

omarxioa@gmail.com · +20 114 022 2004 · omarabdelnaby.dev · linkedin.com/in/omar-xioa · github.com/omarxioa

Summary

Mobile Software Engineer with 5+ years building production iOS and Android apps in Flutter, and 7+ years in software overall. Co-founder of SOAcode, where I lead a 3-engineer mobile team and own delivery end to end — from architecture and estimation to App Store release and post-launch monitoring. Strong in Clean Architecture, Riverpod, and offline-first apps with background services and local notifications. DevOps background means I ship with CI/CD and care about release quality. Native Arabic speaker with professional English, experienced in building Arabic/RTL apps.

Experience

Co-Founder & Mobile Team Lead — SOAcode

Cairo, Egypt · Apr 2021 – Present

- Co-founded SOAcode; lead a team of 3 mobile engineers building client and in-house apps for iOS and Android with Flutter.
- Own mobile delivery end to end: architecture, estimation, development, App Store and Google Play release, and post-launch monitoring.
- Set the team's engineering standards: Riverpod for state management, Clean Architecture layer boundaries, and code review on every pull request.
- Integrate REST APIs, Firebase, local databases (SQLite, Hive), push notifications, Google Maps, and background services.
- Improve app performance and stability through profiling and targeted fixes.
- Grow the team through code review, pair programming, and onboarding; work closely with designers and backend engineers.

DevOps Engineer — Syntax

Cairo, Egypt · Jun 2019 – Mar 2021

- Built and maintained CI/CD pipelines, automating build and release workflows that were previously manual.
- Managed Linux servers, hosting, and deployment environments for web and mobile apps.
- Ran production monitoring and maintenance, shortening the path from merge to verified release.

Projects

Muslim Assistant: Prayer Times — Live on the App Store

- Bilingual (Arabic / English) Islamic companion: prayer times, Adhan, prayer tracking, Quran, tasbih, after-prayer adhkar, and Qibla compass.
- Offline-first: prayer times are calculated on the device for the user's location or a chosen city, with locally scheduled Adhan notifications.
- Built solo from design to App Store release with Flutter, Riverpod, and Clean Architecture.

myMed — in TestFlight beta

- Medication management app with dose reminders, progress tracking, and caregiver support.
- Offline-first with SQLite; reminders keep working after the app is killed or the phone restarts.
- Built with Flutter, Riverpod, and Clean Architecture.

Skills

- **Mobile:** Flutter, Dart, Swift (iOS), Android & iOS platform integration, Arabic / RTL UI
- **Architecture & state:** Clean Architecture, Riverpod, offline-first design
- **Data & services:** REST APIs, Firebase, SQLite, Hive, push and local notifications, background services, Google Maps
- **Delivery:** Git, CI/CD, TestFlight, App Store and Google Play release, Linux
- **Leadership:** code review, mentoring, estimation, team standards

Education & Languages

- **Computer Science & Information Technology** — Sinai University, 2012 – 2017
- **Arabic:** native · **English:** professional working proficiency
